SOLIDFLOOR HEAT
WOODEN FLOORS FOR ON TOP
OF UNDERFLOOR HEATING

ENERGY EFFICIENT WITH SOLIDFLOOR HEAT

Solidfloor has added a new collection named Solidfloor Heat. As the name suggests, these floors are especially designed to be used in combination with under floor heating. Because the combination of high-quality multiplex carrier and 4mm top layer are extraordinarily compact and well built, the heat conduction is highly efficient. Thanks to our innovative production processes it is highly durable and easy to maintain. With a certified heat resistance level of only 0.08, the entire Solidfloor Heat program meets the strictest standards of conductivity and efficiency. It maximizes the benefit of underfloor heating. As a natural resource, wood for the Solidfloor Heat floors is also the environmentally responsible choice.

A CERTIFIED HEAT RESISTANCE OF 0,08 R10 23/50 (m2K)/W

All floors from the Solidfloor Heat program have a certified heat resistance of only 0.08. As a result, maximum benefit is obtained from the underfloor heating with minimal energy loss. This way you can enjoy all benefits that real wooden floors have to offer.

SUSTAINABLE MANUFACTURED WOOD

Wood naturally retains CO2. Throughout the process of processing wood panels, 100% of the CO2 is retained. All Solidfloor wooden products are sourced and produced from sustainable forests. Therefore, for all trees used, new ones are re-planted. As a result, forests will keep their vital role to keep our environment and our world so amazing. And, because we source our Solidfloor HEAT assortment nearby, we actively reduce transportation emissions.

MADE TO LAST

All Solidfloor wooden floors are made to last. That is our core value. Therefore we are confident to offer a 25-year warranty on all our wooden floors, including the entire Heat collection.

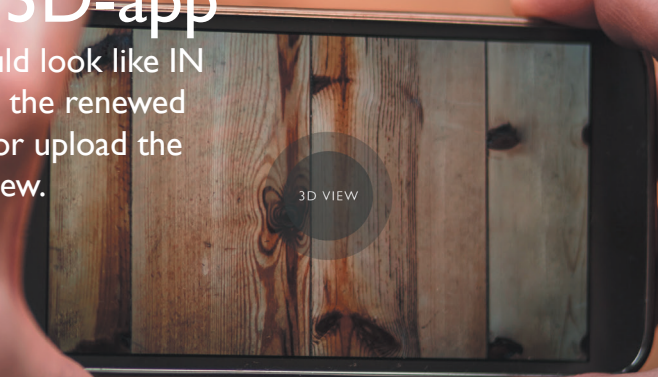

SOLIDFLOOR HEAT: STYLISH AND PRACTICAL

To increase user convenience, all floors within the heat collection are provided with a matt, strong finish of E-Protect lacquer. This solid layer of lacquer ensures easy maintenance and a high wear resistance, so that the floors remain beautiful for a longer period of time. As a result, the floors are easy to clean. Solidfloor has produced specially designed cleaners and care products for the heat floor collection, these are available through affiliated Solidfloor outlets.

The collection offers the option between extra long planks and the timeless herringbone patterns. Because the floors are all brushed - a process in which the softer wood is lightly brushed away from the top layer - a subtle top-layer-structure is created, which makes the wood look and feel even better. In addition, available colors are contemporary yet timeless. For example, you can choose for light white or grey wash or for an 'unfinished look', when the floor looks as if it has not been treated with lacquer or oil layers.

CHECK IT OUT IN 3D-app

Curious to see what a Solidfloor floor would look like IN YOUR OWN HOME? Check it out now in the renewed Solidfloor app. See it on your smartphone or upload the picture to your laptop or PC for a larger view.

NATURE GRADE OF RUSTIC GRADE. WHAT’S THE DIFFERENCE?

The top layer of the Heat collection floor are made of high-quality oak wood. The total thickness of the floor is 11 mm with the top layer of 4mm oak. This top layer, has 2 visible options: Nature Grade and Rustic Grade. The Rustic Grade allows for more knots and color nuances between planks, making the floors look extra lively. With Nature Grade, where only smaller knots are allowed, giving the floors a calm, modern look.

STRIP FLOOR RUSTIC GRADE

SOLIDFLOOR

The profesional’s choice

Solidfloor has been around for decades. As part of the Fetim Group, Solidfloor has a rich history in wooden floors dating back to 1919. It all started with a small collection of wooden floors in which craftsmanship, design and convenience its three important pillars. With first-class floors, Solidfloor has grown steadily into a household name in the interior design industry. A history we are proud of. Over this century, the collection grew steadily and has been enriched with all kinds of new categories in which we maintain the same philosophy. This means that no concessions have to be made when it comes to comfort and style. Gradually, the collection has been completed in which a perfectly fitting Solidfloor floor can be found for every interior. So it is not without reason that Solidfloor has been awarded the title “The professional's choice”.
